

5

Cascading Style Sheets™ (CSS)

OBJECTIVES

In this chapter you will learn:

- To control the appearance of a website by creating style sheets.
- To use a style sheet to give all the pages of a website the same look and feel.
- To use the class attribute to apply styles.
- To specify the precise font, size, color and other properties of displayed text.
- To specify element backgrounds and colors.
- To understand the box model and how to control margins, borders and padding.
- To use style sheets to separate presentation from content.

Outline

- 5.1 Introduction**
- 5.2 Inline Styles**
- 5.3 Embedded Style Sheets**
- 5.4 Conflicting Styles**
- 5.5 Linking External Style Sheets**
- 5.6 Positioning Elements**
- 5.7 Backgrounds**
- 5.8 Element Dimensions**
- 5.9 Box Model and Text Flow**
- 5.10 Media Types**
- 5.11 Building a CSS Drop-Down Menu**
- 5.12 User Style Sheets**
- 5.13 CSS 3**
- 5.14 Wrap-Up**
- 5.15 Web Resources**

5.1 Introduction

- **Cascading Style Sheets (CSS)**
 - Used to specify the presentation of elements separately from the structure of the document
- **CSS validator**
jigsaw.w3.org/css-validator/

5.2 Inline Styles

- **Inline style**
 - declare a style for an individual element by using the **style** attribute in the element's start tag
- **Each CSS property is followed by a colon and the value of the attribute**
 - Multiple property declarations are separated by a semicolon
- **color property sets text color**
 - Color names and hexadecimal codes may be used as the value

Fig. 5.1 | Using inline styles (Part 1 of 2).

```

1 <?xml version = "1.0" encoding = "utf-8"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 5.1: inline.html -->
6 <!-- Using inline styles -->
7 <html xmlns = "http://www.w3.org/1999/xhtml">
8   <head>
9     <title>Inline Styles</title>
10  </head>
11  <body>
12    <p>This text does not have any style applied to it.</p>
13
14    <!-- The style attribute allows you to declare -->
15    <!-- inline styles. Separate multiple style properties -->
16    <!-- with a semicolon. -->
17    <p style = "font-size: 20pt">This text has the
18      <em>font-size</em> style applied to it, making it
19    </p>
20
21    <p style = "font-size: 20pt; color: #6666ff">
22      This text has the <em>font-size</em> and
23      <em>color</em> styles applied to it, making it
24      20pt. and light blue.</p>
25  </body>
26 </html>

```

Style attribute

Sets the paragraph's
font size

Sets the paragraph's
color to light blue

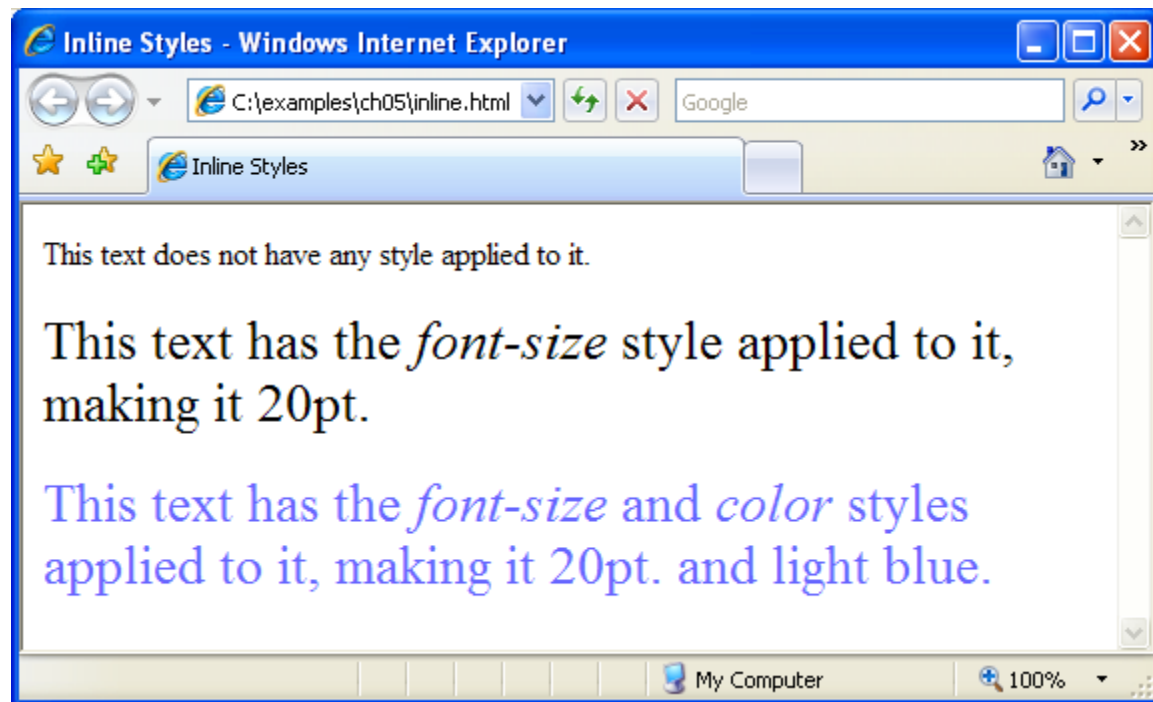

Fig. 5.1 | Using inline styles (Part 2 of 2).

5.3 Embedded Style Sheets

- Styles that are placed in a **style** element use selectors to apply style elements throughout the entire document
- **style** element attribute **type** specifies the MIME type (the specific encoding format) of the style sheet. Style sheets use **text/css**
- Each rule body in a style sheet begins and ends with a curly brace (**{** and **}**).

5.3 Embedded Style Sheets (Cont.)

- **Style-class declarations are preceded by a period and are applied to elements of the specific class**
 - The class attribute applies a style class to an element
- **CSS rules in a style sheet use the same format as inline styles:**
 - The property is followed by a colon (:) and the value of that property
 - Multiple properties are separated by semicolons (;)

5.3 Embedded Style Sheets (Cont.)

- **font-weight** property specifies the “boldness” of text. Possible values are:
 - **bold**
 - **normal** (the default)
 - **bolder** (bolder than bold text)
 - **lighter** (lighter than normal text)
 - Boldness also can be specified with multiples of 100, from 100 to 900 (e.g., 100, 200, ..., 900). Text specified as normal is equivalent to 400, and bold text is equivalent to 700

5.3 Embedded Style Sheets (Cont.)

- **background-color** attribute specifies the background color of the element
- **font-family** attribute names a specific font that should be displayed
 - Generic font families allow authors to specify a type of font instead of a specific font, in case a browser does not support a specific font
- **font-size** property specifies the size used to render the font

```

1 <?xml version = "1.0" encoding = "utf-8"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//en"
3 "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 5.2: embedded.html -->
6 <!-- Embedded style sheets. -->
7 <html xmlns = "http://www.w3.org/1999/xhtml">
8   <head>
9     <title>Style Sheets</title>
10
11     <!-- this begins the style sheet section -->
12     <style type = "text/css">
13       em { font-weight: bold;
14           color: black }
15       h1 { font-family: tahoma, helvetica, sans-serif }
16       p { font-size: 12pt;
17          font-family: arial, sans-serif }
18       .special { color: #6666ff }
19     </style>
20   </head>
21   <body>
22     <!-- this class attribute applies the .special style -->
23     <h1 class = "special">Deitel & Associates, Inc.</h1>
24
25     <p>Deitel & Associates, Inc. is an internationally
26     recognized corporate training and publishing organization
27     specializing in programming languages, Internet/World
28     wide web technology and object technology education.
29     The company provides courses on Java, C++, Visual Basic,
30     C#, C, Internet and world wide web programming, Object
31     Technology, and more.</p>

```

Style sheet begins

Sets the MIME type to text/css

Sets the properties for all elements in the document within em tags

Sets the properties for all h1 elements in the document

Sets the properties for all p elements in the document

Creates a special class

Style sheet ends

Fig. 5.2
Embedded style sheets
(Part 1 of 2).

```

32 <h1>Clients</h1>
33 <p class = "special"> The company's clients include many
34 <em>Fortune 1000 companies</em>, government agencies,
35 branches of the military and business organizations.
36 Through its publishing partnership with Prentice Hall,
37 Deitel & Associates, Inc. publishes leading-edge
38 programming textbooks, professional books, interactive
39 web-based multimedia Cyber Classrooms, satellite
40 courses and world wide web courses.</p>
41 </body>
42 </html>

```

Fig. 5.2
Embedded
sheets
2 of 2).

The special class is
applied to this p element

5.4 Conflicting Styles (Cont.)

- **text-decoration** property applies decorations to text in an element

underline

overline

line-through

blink

5.4 Conflicting Styles (Cont.)

- **Pseudoclasses give the author access to content not specifically declared in the document**
- **Pseudoclasses are separated by a colon (with no surrounding spaces) from the name of the element to which they are applied**
- **hover pseudoclass is activated when the user moves the mouse cursor over an element**

5.4 Conflicting Styles (Cont.)

- **To apply rules to multiple elements, separate the elements with commas in the style sheet**
- **To apply rules to only a certain type of element that is a child of another type, separate the element names with spaces**

5.4 Conflicting Styles (Cont.)

- **Relative length measurements:**
 - **px** (pixels – size varies depending on screen resolution)
 - **em** (usually the height of a font's uppercase M)
 - **ex** (usually the height of a font's lowercase x)
 - **Percentages** (of the font's default size)
- **Absolute-length measurements (units that do not vary in size):**
 - **in** (inches)
 - **cm** (centimeters)
 - **mm** (millimeters)
 - **pt** (points; $1 \text{ pt} = 1/72 \text{ in}$)
 - **pc** (picas; $1 \text{ pc} = 12 \text{ pt}$)

Fig. 5.3

in style
sheets (Part
1 of 3).

```

1 <?xml version = "1.0" encoding = "utf-8"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 5.3: advanced.html -->
6 <!-- Inheritance in style sheets. -->
7 <html xmlns = "http://www.w3.org/1999/xhtml">
8   <head>
9     <title>More Styles</title>
10    <style type = "text/css">
11      body { font-family: arial, helvetica, sans-serif }
12      a.nodec { text-decoration: none }
13      a:hover { text-decoration: underline }
14      li em { font-weight: bold }
15      h1, em { text-decoration: underline }
16      ul { margin-left: 20px }
17      ul ul { font-size: .8em }
18    </style>
19  </head>
20  <body>
21    <h1>Shopping list for Monday:</h1>
22

```

Defines the class `nodec` that can only be used by anchor elements

Sets the properties for the `hover` pseudoclass for the `a` element, which is activated when the user moves the cursor over an anchor element

All `em` elements that are children of `li` elements set to bold

Applies underline style to all `h1` and `em` elements

```

23 <ul>
24   <li>Milk</li>
25   <li>Bread
26     <ul>
27       <li>white bread</li>
28       <li>Rye bread</li>
29       <li>whole wheat bread</li>
30     </ul>
31   </li>
32   <li>Rice</li>
33   <li>Potatoes</li>
34   <li>Pizza <em>with mushrooms</em></li>
35 </ul>
36
37 <p><em>Go to the</em>
38   <a class = "nodec" href = "http://www.deitel.com">
39     Grocery store</a>
40 </p>
41 </body>
42 </html>

```

in style
sheets (Part
2 of 3).

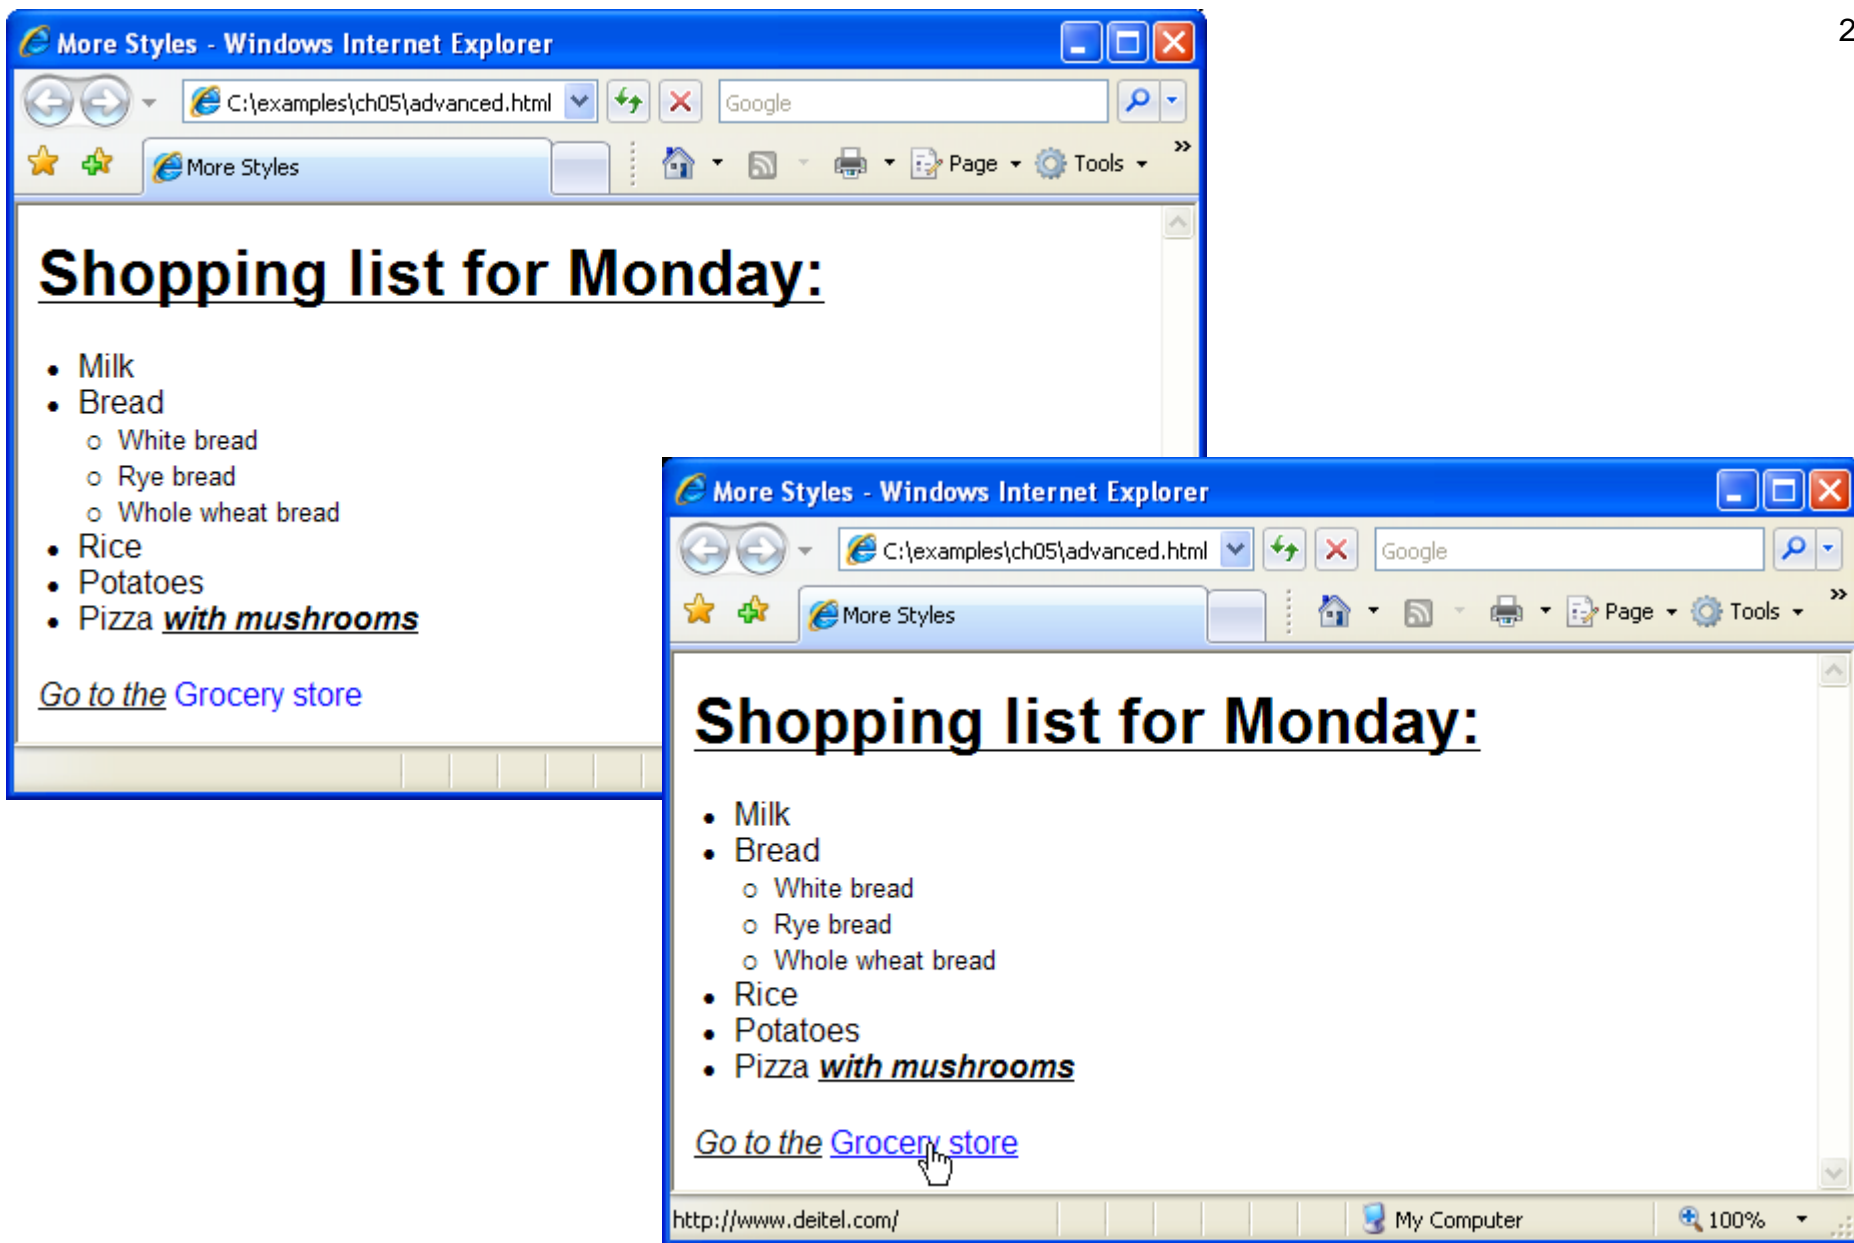

Fig. 5.3 | Inheritance in style sheets (Part 3 of 3).

5.5 Linking External Style Sheets

- **External style sheets are separate documents that contain only CSS rules**
- **Help create a uniform look for a website**
 - **separate pages can all use the same styles**
 - **Modifying a single style-sheet file makes changes to styles across an entire website**
 - **External style sheets separate content from presentation, allowing for more consistent look-and-feel, more efficient development, and better performance.**

5.5 Linking External Style Sheets (Cont.)

- **link element**
 - Uses **rel** attribute to specify a relationship between two documents
 - **rel** attribute declares the linked document to be a stylesheet for the document
- **type** attribute specifies the MIME type of the related document
- **href** attribute provides the URL for the document containing the style sheet

```
1  /* Fig. 5.4: styles.css */
2  /* External stylesheet */
3
4  body      { font-family: arial, helvetica, sans-serif }
5
6  a.nodect  { text-decoration: none }
7
8  a:hover   { text-decoration: underline }
9
10 li em     { font-weight: bold }
11
12 h1, em    { text-decoration: underline }
13
14 ul        { margin-left: 20px }
15
16 ul ul     { font-size: .8em; }
```

Fig. 5.4
External
style sheet.

```

1 <?xml version = "1.0" encoding = "utf-8"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 5.6: external.html -->
6 <!-- Linking an external style sheet. -->
7 <html xmlns = "http://www.w3.org/1999/xhtml">
8   <head>
9     <title>Linking External Style Sheets</title>
10    <link rel = "stylesheet" type = "text/css"
11        href = "styles.css" />
12  </head>
13  <body>
14    <h1>Shopping list for <em>Monday</em>:</h1>
15
16    <ul>
17      <li>Milk</li>
18      <li>Bread
19        <ul>
20          <li>white bread</li>
21          <li>Rye bread</li>
22          <li>whole wheat bread</li>
23        </ul>
24      </li>
25      <li>Rice</li>
26      <li>Potatoes</li>
27      <li>Pizza <em>with mushrooms</em></li>
28    </ul>
29

```

Fig. 5.5 |
Linking an
external
style sheet
 (Part 1 of 2).

The linked document is declared to be the current one's stylesheet

The linked document's MIME type is text/css

The linked document's URL is styles.css

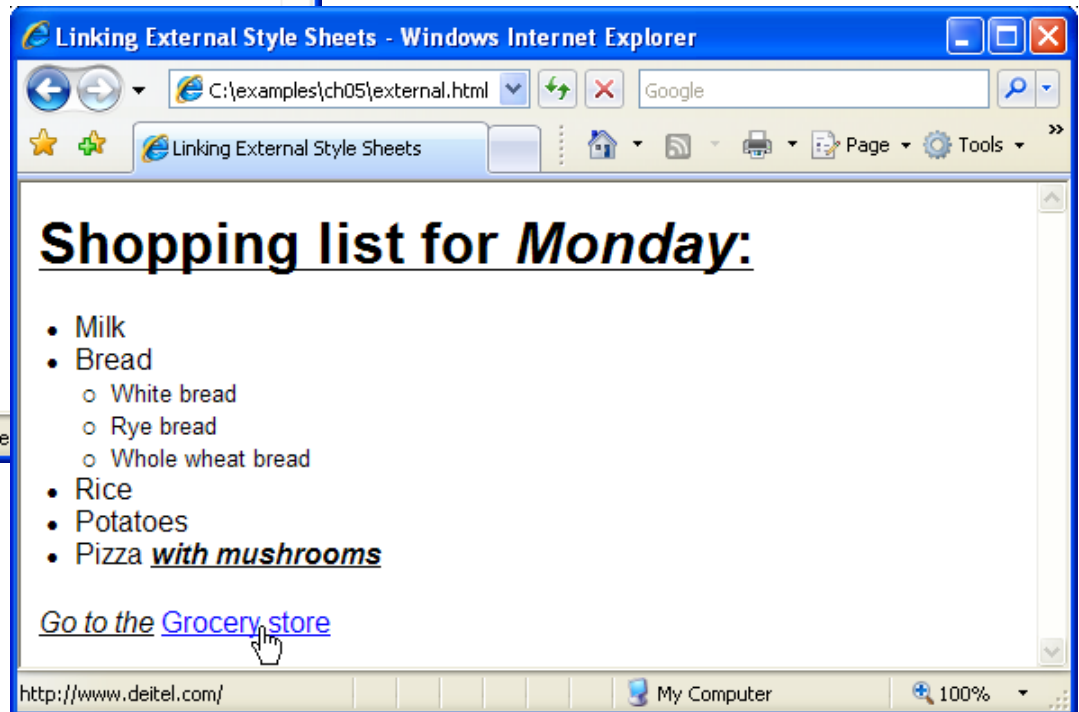

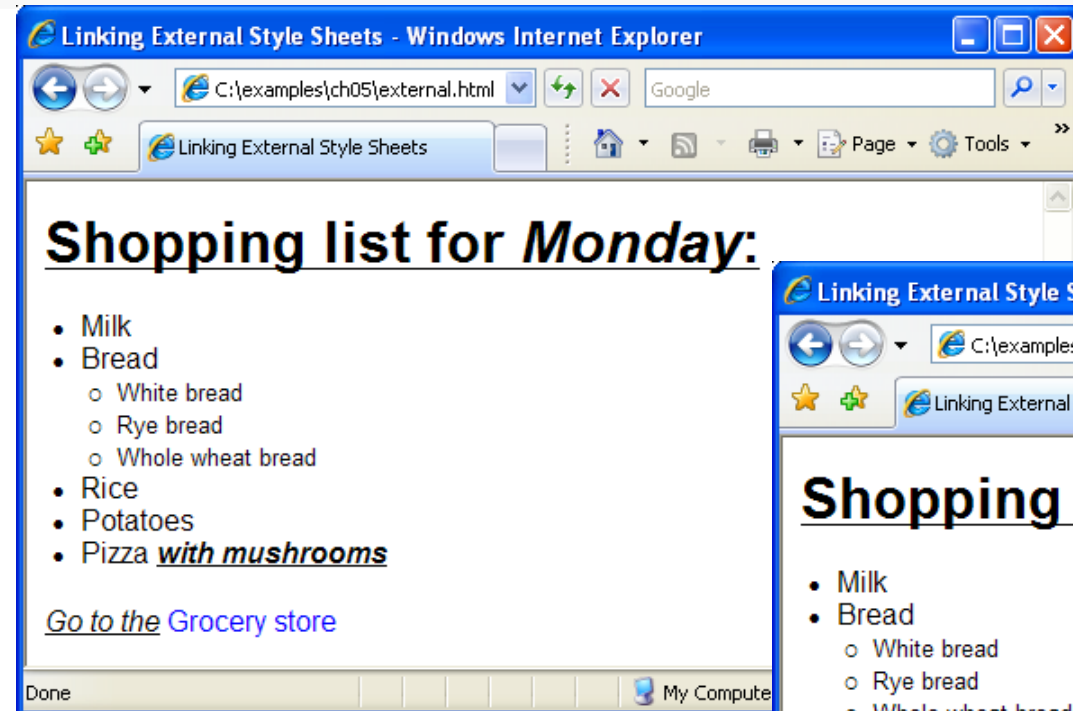

```

30 <p><em>Go to the</em>
31 <a class = "nodec" href = "http://www.deitel.com">
32     Grocery store</a>
33 </p>
34 </body>
35 </html>

```

Fig. 5.5 |
Linking an
external
style sheet
(Part 2 of 2).

Performance Tip 5.1

Reusing external style sheets reduces load time and bandwidth usage on a server, since the style sheet can be downloaded once, stored by the web browser, and applied to all pages on a website.

5.6 Positioning Elements

- **CSS position property**
 - Allows absolute positioning, which provides greater control over where on a page elements reside
 - Normally, elements are positioned on the page in the order that they appear in the XHTML document
 - Specifying an element's position as absolute removes it from the normal flow of elements on the page and positions it according to distance from the top, left, right or bottom margin of its parent element

5.6 Positioning Elements (Cont.)

- **The z -index property allows a developer to layer overlapping elements**
- **Elements that have higher z -index values are displayed in front of elements with lower z -index values**

```

1 <?xml version = "1.0" encoding = "utf-8"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 5.6: positioning.html -->
6 <!-- Absolute positioning of elements. -->
7 <html xmlns = "http://www.w3.org/1999/xhtml">
8   <head>
9     <title>Absolute Positioning</title>
10    <style type = "text/css">
11      .bgimg { position: absolute;
12              top: 0px;
13              left: 0px;
14              z-index: 1 }
15      .fgimg { position: absolute;
16              top: 25px;
17              left: 100px;
18              z-index: 2 }
19      .text   { position: absolute;
20              top: 25px;
21              left: 100px;
22              z-index: 3;
23              font-size: 20pt;
24              font-family: tahoma, geneva, sans-serif }
25    </style>
26  </head>
27  <body>
28    <p><img src = "bgimg.gif" class = "bgimg"
29      alt = "First positioned image" /></p>
30

```

Class that sets an element's absolute position at the top left of the containing element

Lowest z-index, so this element is behind all the others

Set element's position 25px from the top and 100 from the left

This element will appear on top of the first one, since it has a higher z-index

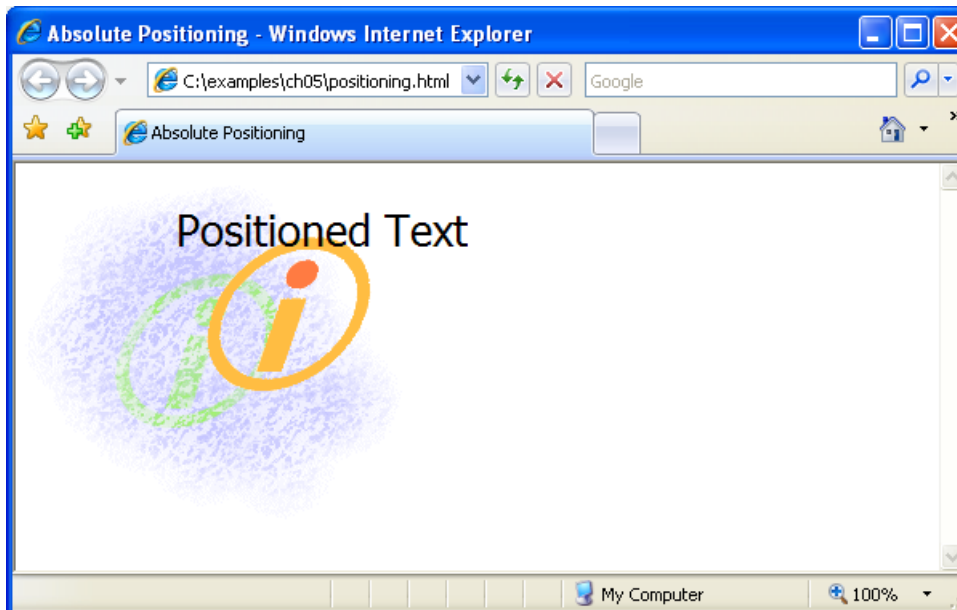

This element will appear on top of all others, since it has the highest z-index

Fig. 5.6 Absolute positioning of elements (Part 1 of 2).

```
31 <p><img src = "fgimg.gif" class = "fgimg"
32     alt = "second positioned image" /></p>
33
34 <p class = "text">Positioned Text</p>
35 </body>
36 </html>
```

Fig. 5.6 |
Absolute
positioning
of elements
(Part 2 of 2).

5.6 Positioning Elements (Cont.)

- **Relative positioning keeps elements in the general flow on the page and offsets them by the specified top, left, right or bottom value**

Fig. 5.7
Relative
positioning
of elements
(Part 1 of 2).

```

1 <?xml version = "1.0" encoding = "utf-8"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 5.7: positioning2.html -->
6 <!-- Relative positioning of elements. -->
7 <html xmlns = "http://www.w3.org/1999/xhtml">
8   <head>
9     <title>Relative Positioning</title>
10    <style type = "text/css">
11      p      { font-size: 1.3em;
12              font-family: verdana, arial, sans-serif }
13      span   { color: red;
14              font-size: .6em;
15              height: 1em }
16      .super { position: relative;
17              top: -1ex }
18      .sub   { position: relative;
19              bottom: -1ex }
20      .shiftleft { position: relative;
21                  left: -1ex }
22      .shiftright { position: relative;
23                   right: -1ex }
24    </style>
25  </head>
26  <body>
27    <p>The text at the end of this sentence
28    <span class = "super">is in superscript</span>.</p>
29

```

Positions element 5 ex upwards

Positions element 1 ex downwards

Positions element 1 ex to the left

Positions element 1 ex to the right

Apply the super class to this span element

```

30 <p>The text at the end of this sentence
31 <span class = "sub">is in subscript</span>.</p>
32
33 <p>The text at the end of this sentence
34 <span class = "shiftleft">is shifted left</span>.</p>
35
36 <p>The text at the end of this sentence
37 <span class = "shiftright">is shifted right</span>.</p>
38 </body>
39 </html>

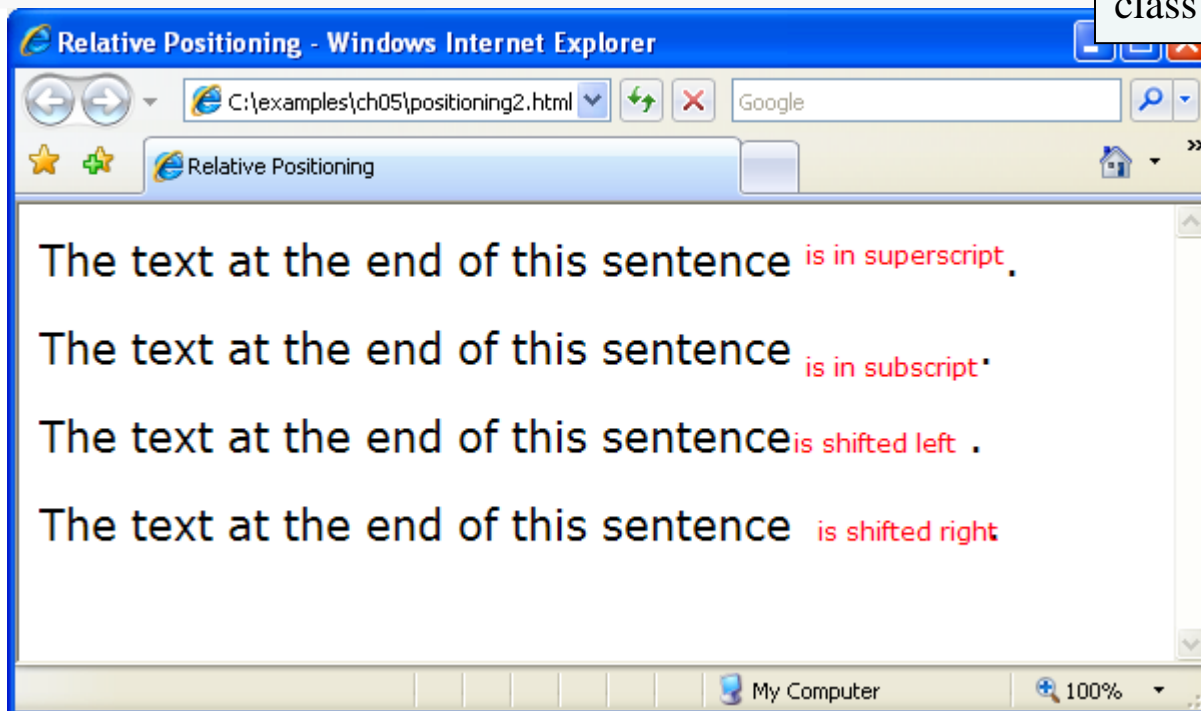

```

Apply the sub class to this span element

Apply the shiftleft class to this span element

Apply the shiftright class to this span element

g
of elements

5.7 Backgrounds

- **CSS can control the backgrounds of block-level elements by adding:**
 - **Colors**
 - **Images**

5.7 Backgrounds (Cont.)

- **Property background-image**
 - Specifies the URL of the image, in the format `url(fileLocation)`
- **Property background-position**
 - Places the image on the page using the values `top`, `bottom`, `center`, `left` and `right` individually or in combination for vertical and horizontal positioning. You can also position by using lengths

5.7 Backgrounds (Cont.)

- **background-repeat** property controls the tiling of the background image
 - Setting the tiling to **no-repeat** displays one copy of the background image on screen
 - Setting to **repeat** (the default) tiles the image vertically and horizontally
 - Setting to **repeat-x** tiles the image only horizontally
 - Setting to **repeat-y** tile the image only vertically

5.7 Backgrounds (Cont.)

- **Property setting**

- background-attachment: fixed**

- **fixes the image in the position specified by background-position. Scrolling the browser window will not move the image from its set position. The default value, scroll, moves the image as the user scrolls the window**

5.7 Backgrounds (Cont.)

- **text-indent** property indents the first line of text in the element by the specified amount
- **font-style** property allows you to set text to **none**, **italic** or **oblique**

```

1 <?xml version = "1.0" encoding = "utf-8"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 5.8: background.html -->
6 <!-- Adding background images and indentation. -->
7 <html xmlns = "http://www.w3.org/1999/xhtml">
8   <head>
9     <title>Background Images</title>
10    <style type = "text/css">
11      body { background-image: url(logo.gif);
12             background-position: bottom right;
13             background-repeat: no-repeat;
14             background-attachment: fixed;
15             background-color: #eeeeee }
16      p     { font-size: 18pt;
17             color: #1144AA;
18             text-indent: 1em;
19             font-family: arial, sans-serif; }
20      .dark { font-weight: bold }
21    </style>
22  </head>

```

Inserts the image at
logo.gif as the
background

Places the image at the
bottom right of the page

Displays only one copy of the
image

Keeps the image in place
when the user scrolls in the
browser window

Fills the remainder of the
window with a light gray
background

Indents the first line of text in
the element by 1 em

Fig. 5.8
**Adding
background
images and
indentation**
(part 1 of 2).

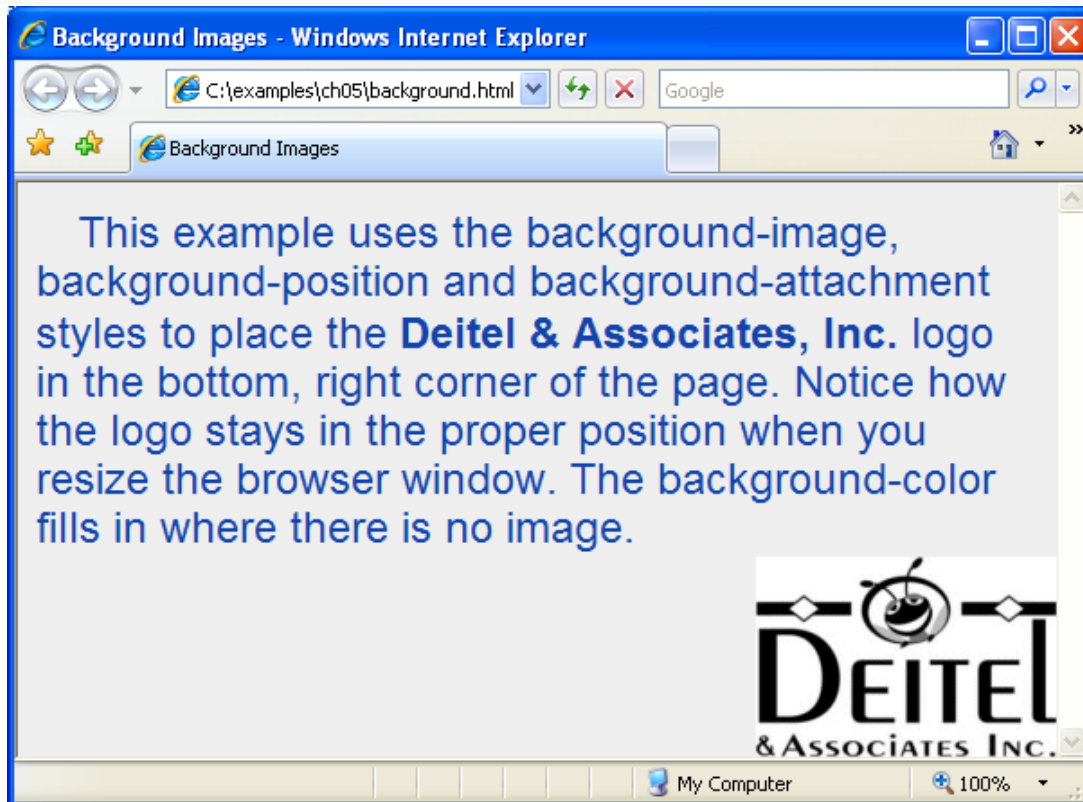

```

23 <body>
24 <p>
25 This example uses the background-image,
26 background-position and background-attachment
27 styles to place the <span class = "dark">Deitel
28 & Associates, Inc.</span> logo in the bottom,
29 right corner of the page. Notice how the logo
30 stays in the proper position when you resize the
31 browser window. The background-color fills in where
32 there is no image.
33 </p>
34 </body>
35 </html>

```

Fig. 5.8 |
Adding
background
images and
indentation
(Part 2 of 2).

5.8 Element Dimensions

- Dimensions of elements on a page can be set with CSS by using properties `height` and `width`
 - Their values can be relative or absolute
- Text in an element can be centered using `text-align: center`; other values for the `text-align` property are `left` and `right`

5.8 Element Dimensions (Cont.)

- **Problem with setting both vertical and horizontal dimensions of an element**
 - Content might sometimes exceed the set boundaries, in which case the element must be made large enough for all the content to fit
 - Can set the `overflow` property to `scroll`, which adds scroll bars if the text overflows the boundaries set for it

Fig. 5.9
Element
dimensions
and text
alignment
(Part 1 of 2).

```

1 <?xml version = "1.0" encoding = "utf-8"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 5.9: width.html -->
6 <!-- Element dimensions and text alignment. -->
7 <html xmlns = "http://www.w3.org/1999/xhtml">
8   <head>
9     <title>Box Dimensions</title>
10    <style type = "text/css">
11      div { background-color: #aaccff;
12            margin-bottom: .5em;
13            font-family: arial, helvetica, sans-serif }
14    </style>
15  </head>
16  <body>
17    <div style = "width: 20%">Here is some
18      text that goes in a box which is
19      set to stretch across twenty percent
20      of the width of the screen.</div>
21
22    <div style = "width: 80%; text-align: center">
23      Here is some CENTERED text that goes in a box
24      which is set to stretch across eighty percent of
25      the width of the screen.</div>
26

```

Sets the width of the element
to 20% of the browser's
screen's size

Sets the width of the element
to 80% of the browser's
screen's size and centers it

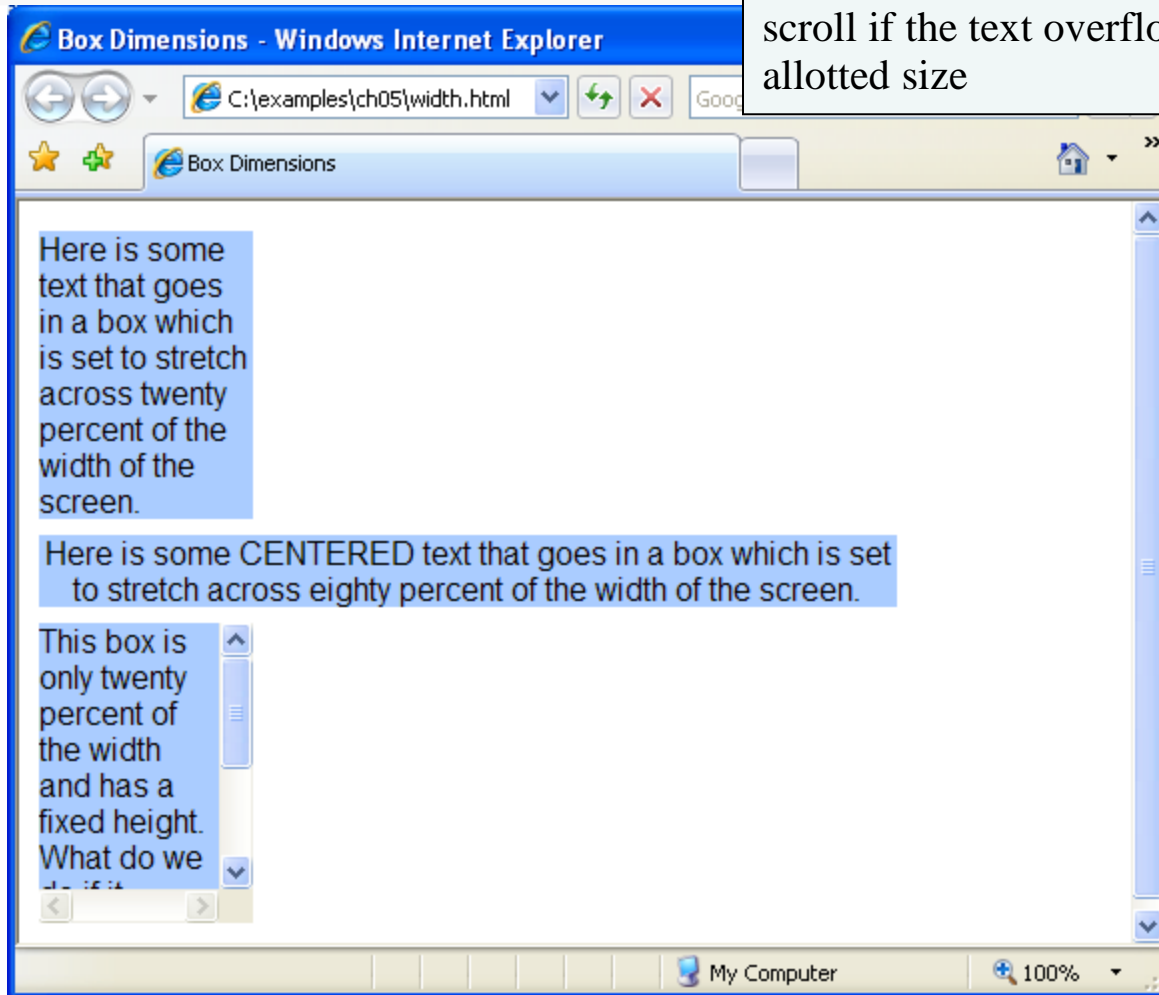

```

27 <div style = "width: 20%; height: 150px; overflow: scroll">
28 This box is only twenty percent of
29 the width and has a fixed height.
30 What do we do if it overflows? Set the
31 overflow property to scroll!</div>
32 </body>
33 </html>

```

Sets the width of the element to 20% of the browser's screen's size, the height to 150 px, and allows the element to scroll if the text overflows the allotted size

Fig. 5.9
Element
dimensions
and text
alignment
(Part 2 of 2).

5.9 Box Model and Text Flow

- **Block-level XHTML elements have a virtual box drawn around them based on the box model**
- **When the browser renders using the box model, each element is surrounded by:**
 - **Padding**
 - **The padding property determines the distance between the content inside an element and the edge of the element**
 - **Padding be set for each side of the box by using padding-top, padding-right, padding-left and padding-bottom**
 - **Margin**
 - **Determines the distance between the element's edge and any outside text**
 - **Margins for individual sides of an element can be specified by using margin-top, margin-right, margin-left and margin-bottom**
 - **Border**

5.9 Box Model and Text Flow (Cont.)

- **The border is controlled using the properties:**
 - **border-width**
 - May be set to any of the CSS lengths or to the predefined value of **thin**, **medium** or **thick**
 - **border-color**
 - Sets the color used for the border
 - **border-style**
 - Options are: **none**, **hidden**, **dotted**, **dashed**, **solid**, **double**, **groove**, **ridge**, **inset** and **outset**

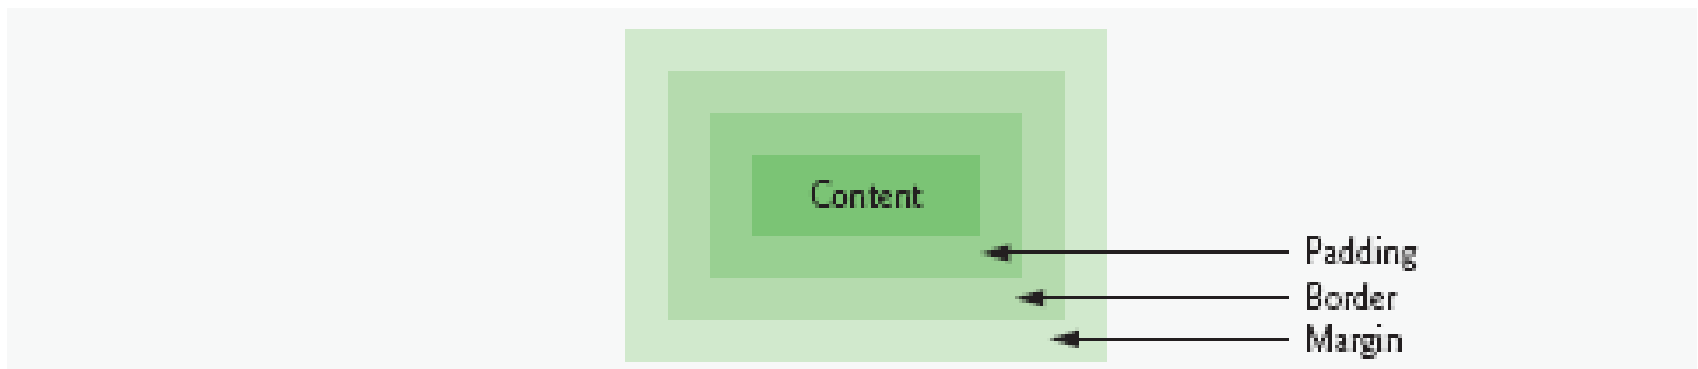

Fig. 5.10 | Box model for block-level elements.

Fig. 5.11 Borders of block-level elements (Part 1 of 2).

Defines several border classes

```
1 <?xml version = "1.0" encoding = "utf-8"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 5.11: borders.html -->
6 <!-- Borders of block-level elements. -->
7 <html xmlns = "http://www.w3.org/1999/xhtml">
8   <head>
9     <title>Borders</title>
10    <style type = "text/css">
11      div { text-align: center;
12           width: 50%;
13           position: relative;
14           left: 25%;
15           border-width: 4px }
16      .medium { border-width: medium }
17      .thin { border-width: thin }
18      .solid { border-style: solid }
19      .double { border-style: double }
20      .groove { border-style: groove }
21      .inset { border-style: inset }
22      .outset { border-style: outset }
23      .dashed { border-style: dashed }
24      .red { border-color: red }
25      .blue { border-color: blue }
26    </style>
27  </head>
```

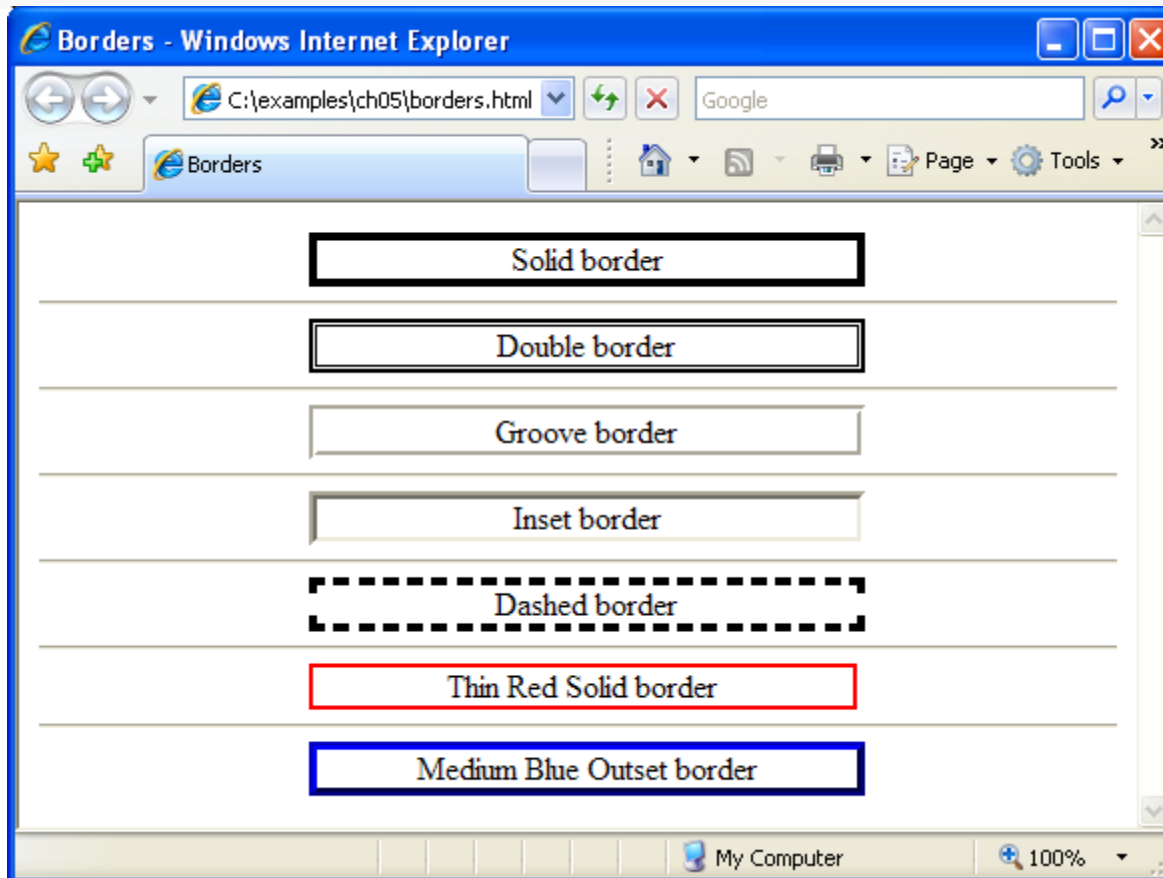

```

28 <body>
29   <div class = "solid">Solid border</div><hr />
30   <div class = "double">Double border</div><hr />
31   <div class = "groove">Groove border</div><hr />
32   <div class = "inset">Inset border</div><hr />
33   <div class = "dashed">Dashed border</div><hr />
34   <div class = "thin red solid">Thin Red Solid border</div><hr />
35   <div class = "medium blue outset">Medium Blue Outset border</div>
36 </body>
37 </html>

```

Applies several classes to the same element

Fig. 5.11 |
Borders of
block-level
elements
(Part 2 of 2).

5.11 Building a CSS Drop-Down Menu

- **:hover** pseudoclass

- used to apply styles to an element when the mouse cursor is over it

- **display** property

- allows a programmer to decide if an element is displayed as a block element, inline element, or is not rendered at all (none)

Fig. 5.14
CSS drop-
down menu
(Part 1 of 2).

```

1 <?xml version = "1.0" encoding = "utf-8"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 5.14: dropdown.html -->
6 <!-- CSS drop-down menu. -->
7 <html xmlns = "http://www.w3.org/1999/xhtml">
8   <head>
9     <title>
10       Drop-Down Menu
11     </title>
12     <style type = "text/css">
13       body          { font-family: arial, sans-serif }
14       div.menu      { font-weight: bold;
15                     color: white;
16                     border: 2px solid #225599;
17                     text-align: center;
18                     width: 10em;
19                     background-color: #225599 }
20       div.menu:hover a { display: block }
21       div.menu a      { display: none;
22                       border-top: 2px solid #225599;
23                       background-color: white;
24                       width: 10em;
25                       text-decoration: none;
26                       color: black }
27       div.menu a:hover { background-color: #dfeeff }
28     </style>
29   </head>
30   <body>

```

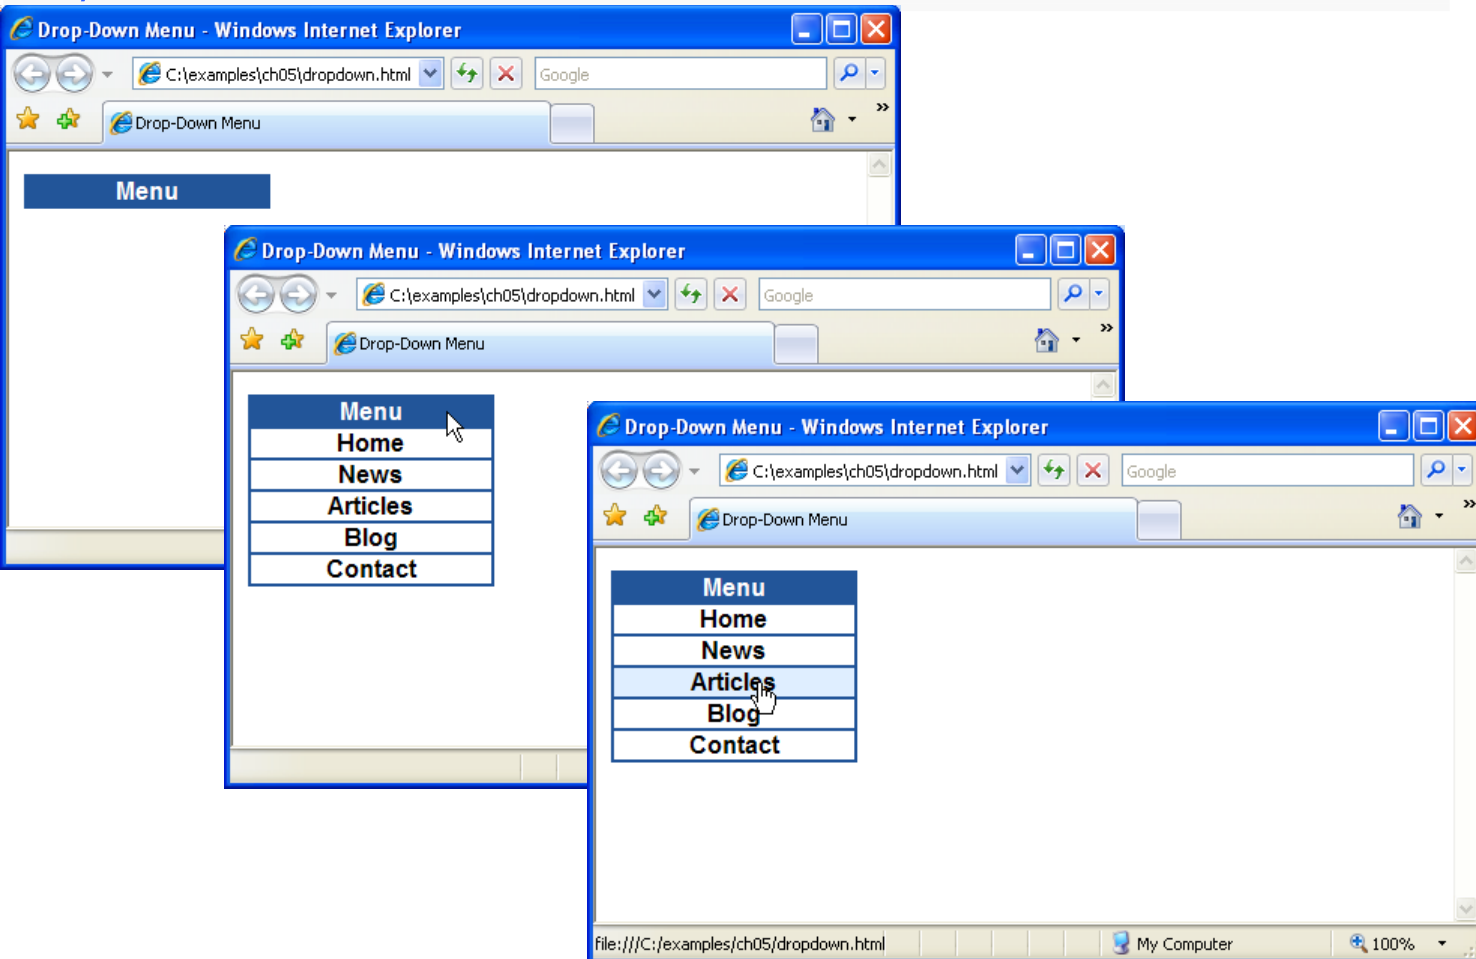

Sets anchor elements in a menu div to be displayed as block-level when the menu is moused-over

Prevents the browser from rendering the links inside the menu div

Sets anchor elements in a menu div to have a light-blue background when they are moused-over

```
31 <div class = "menu">Menu
32 <a href = "#">Home</a>
33 <a href = "#">News</a>
34 <a href = "#">Articles</a>
35 <a href = "#">Blog</a>
36 <a href = "#">Contact</a>
37 </div>
38 </body>
39 </html>
```

Fig. 5.14 |
CSS drop-
down menu
(Part 2 of 2).

5.12 User Style Sheets

- **Users can define their own user style sheets to format pages based on their preferences**
- **Absolute font size measurements override user style sheets, while relative font sizes will yield to a user-defined style**
- **User style sheets are not linked to a document; rather, they are set in the browser's options**

```

1 <?xml version = "1.0" encoding = "utf-8"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 5.15: user_absolute.html -->
6 <!-- pt measurement for text size. -->
7 <html xmlns = "http://www.w3.org/1999/xhtml">
8   <head>
9     <title>User styles</title>
10    <style type = "text/css">
11      .note { font-size: 9pt }
12    </style>
13  </head>
14  <body>
15    <p>Thanks for visiting my website. I hope you enjoy it.
16    </p><p class = "note">Please Note: This site will be
17    moving soon. Please check periodically for updates.</p>
18  </body>
19 </html>

```

Fig. 5.15 | pt measurement for text size.

A class defined by the author with absolute measurements: a font-size of 9 pt

```
1  /* Fig. 5.16: userstyles.css */
2  /* A user stylesheet */
3  body { font-size: 20pt;
4         color: yellow;
5         background-color: #000080 }
```

A different font-size of 20 pt is defined by the user for all body elements

Fig. 5.16 |
User style sheet.

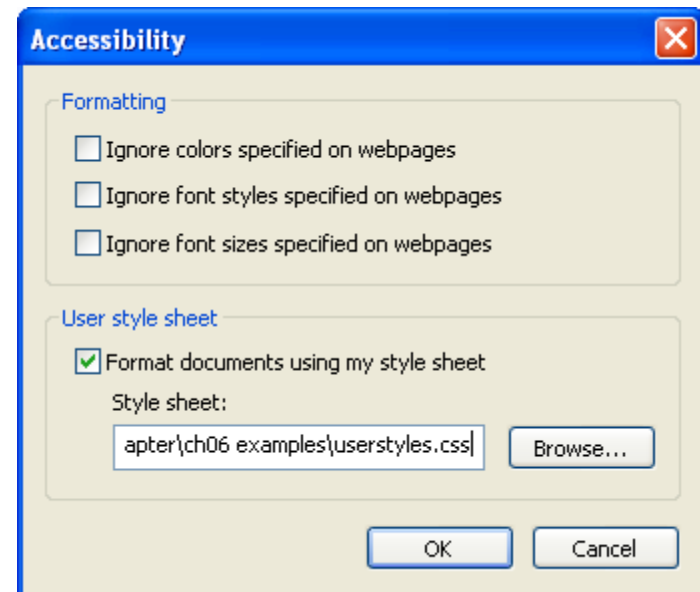

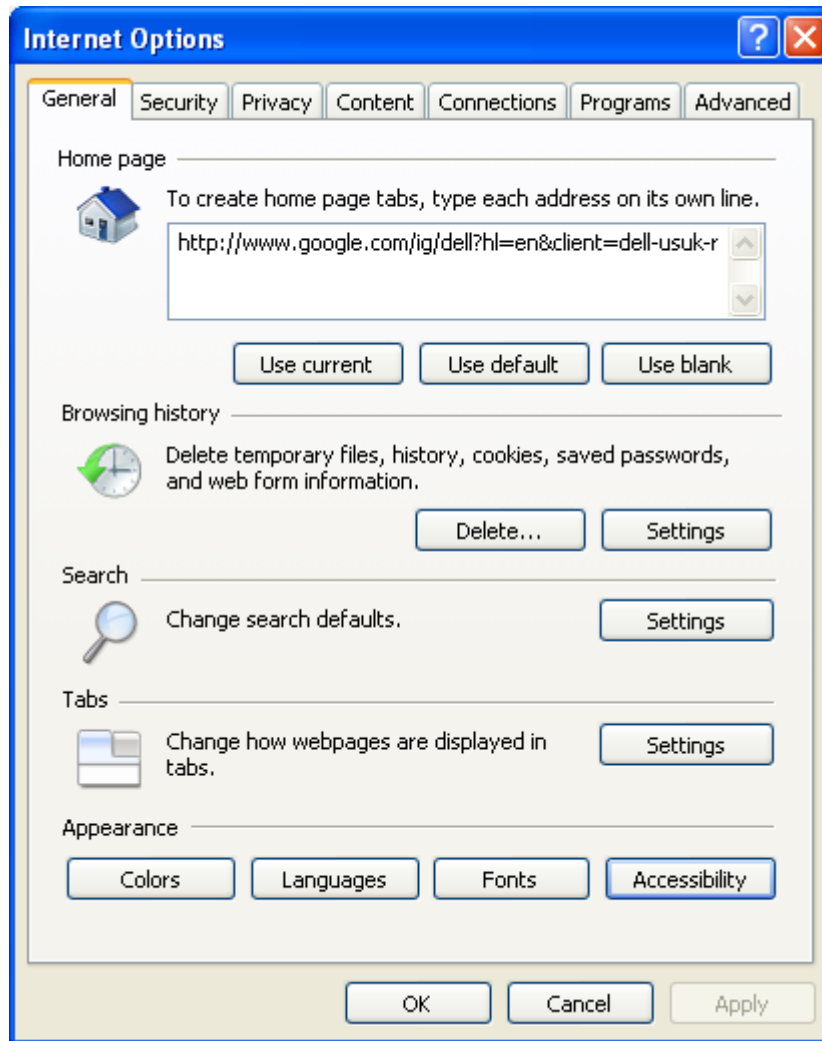

Fig. 5.17 | User style sheet in Internet Explorer 7.

The author's style has higher precedence than the user's, so the font is 9 pt

Fig. 5.18 | User style sheet applied with pt measurement.

```

1 <?xml version = "1.0" encoding = "utf-8"?>
2 <!DOCTYPE html PUBLIC "-//W3C//DTD XHTML 1.0 Strict//EN"
3   "http://www.w3.org/TR/xhtml1/DTD/xhtml1-strict.dtd">
4
5 <!-- Fig. 5.19: user_relative.html -->
6 <!-- em measurement for text size. -->
7 <html xmlns = "http://www.w3.org/1999/xhtml">
8   <head>
9     <title>User styles</title>
10    <style type = "text/css">
11      .note { font-size: .75em }
12    </style>
13  </head>
14  <body>
15    <p>Thanks for visiting my website. I hope you enjoy it.
16  </p><p class = "note">Please Note: This site will be
17    moving soon. Please check periodically for updates.</p>
18  </body>
19 </html>

```

Fig. 5.19 | em
measurement
for text size.

A relative measurement of
.75 em is used by the author
for the font size

The user style sheet is considered, so the font-size is 15 pt (.75 em for 20 pt)

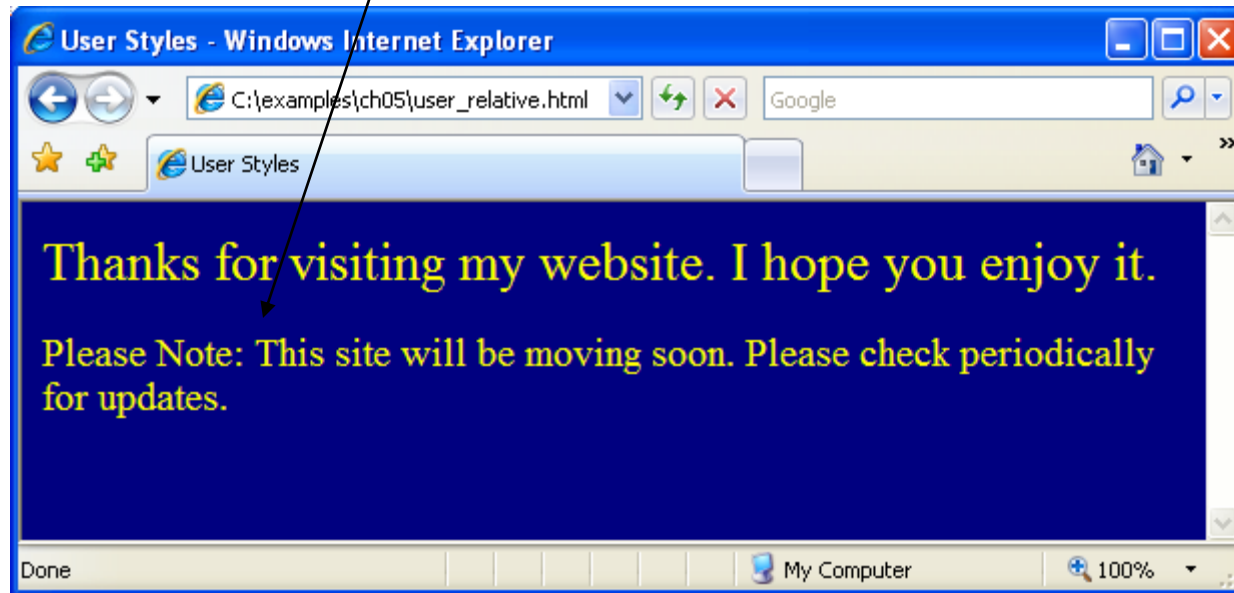

Fig. 5.20 | User style sheet applied with em measurement.

5.13 CSS 3

- **While CSS 2 is the current W3C Recommendation, CSS 3 is in development, and some browsers are beginning to implement some of the new features that will be in the CSS 3 specification**
- **CSS 3 will introduce new features related to borders, backgrounds, text effects, layout, and more**
